

Wiper motor reducer

Part number V12873

Always disconnect the battery when working around electrical systems

Mount wiper reducer in well ventilated area under the dash and away from any flammable material and where someone might touch, as resistor will become warm to the touch. Best to clamp to metal for best heat sink.

Connect one end of the reducer to the wiper switch, connect the other end to the wiper motor.

Check the voltage to the wiper motor when the motor is running as the resistor will not reduce voltage unless connected and the motor is operating.

This reducer may not work on all wiper motors, depends on the actual condition of the motor itself. May run faster or slower depending on the motor condition.
