

Check out our new [FP02 Electric Fuel Pump kit](#)! It's designed to boost your engine's start time - you'll enjoy nearly instant fuel pressure that fills the carb bowls quickly, even if your car's been parked for a while.

Say goodbye to those long cranks waiting for the mechanical pump to do its job! Your battery and starter will definitely thank you. Plus, you can run this electric pump alongside your mechanical one. And here's a bonus: if your mechanical fuel pump ever lets you down, the electric one has your back, ensuring you get home safely with consistent fuel pressure, no matter the load or RPM.

The FP02 Electric Fuel Pump kit also features a fail-safe that shuts off power if there's an accident or if you forget to turn it off while the engine's off—thanks to sensing the oil pressure.

Our kit [FP02 Kit](#) comes complete with everything you need for installation and clear instructions. It's low pressure at 2.5-4.5 PSI and handles 30 gallons per hour, perfect for carbureted engines only!
