

I get a lot of questions each week about how to add turn signals to cars and trucks, and what the best option.

If you're starting from scratch with a vehicle that wasn't originally wired for turn signals, the best choice is definitely our [TS01 turn signal kit](#). This kit has everything you need to install turn signals, including the column switch, 12 volt flasher that will operate standard and LED bulbs and a built-in wiring harness for the front and rear signal lights.

Just a heads up, you'll need to provide your own bulbs and connectors since those can be different for each vehicle. Check out the image below to see what's included in the kit, along with a handy wiring diagram!

Have a safe weekend!

PS. know some of you will ask, "what about 6 volt cars?" we am looking into providing these kits in 6 volts. Shoot me a note back if interested.....
